Art Unit: 2614

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

2. Claim 46 is rejected under 35 U.S.C. 103(a) as being unpatentable over the article "Telesoftware: Home computing via Broadcast Teletext" by Hedger or Japanese Patent Document #55-028690 to Oono et al. in view of European Patent Document #0,112,626 to Bashour.

I. The showing of Hedger and Oono et al.:

Hedger (figure 1) and Oono et al. (figure 3) each illustrate respective TV signal interface/decoding devices which include:

1) Circuitry for receiving TV signals from a TV distribution network wherein the received TV signals include computer software (i.e. Telesoftware) embedded therein during unused lines of the VBI, whereby signaling embedded during the VBI was known to have caused substantially no visual interference to TV signals when displayed;

2) Circuitry for receiving the TV signals and for extracting the embedded software therefrom, wherein the extracted software represents video-game software;

3) A programmable computer which loads and runs said video-game software to "play" said video game.

Art Unit: 2614

II. Differences:

In the systems disclosed by Hedger (figure 1) and Oono et al. (figure 3), the TV receiver's display was used to display the video-game thereby causing at least some "interference" with the display of the normal TV programming.

III. Obviousness:

Bashour (e.g. figure 1) has been cited to show that it was known in the art to have provided such TV signal interface/decoding devices with additional/second display circuitry (e.g. @ 2) to enable the embedded data service (e.g. such as a video game) to be displayed without disturbing the display of normal TV signals of the TV receiver's display [note lines 13-20 on page 1 and lines 1-4 on page 2]. It would have been obvious to one of ordinary skill in the art to have modified the interface/decoding devices of either Hedger (figure 1) or Oono et al. (figure 3) with an additional/second display element to avoid interferences to the normal TV broadcast as was shown to be both known and desirable by Bashour.

3. Claim 47 and 48 are rejected under 35 U.S.C. 103(a) as being unpatentable over the article "Telesoftware: Home computing via Broadcast Teletext" by Hedger or Japanese Patent Document #55-028690 to Oono et al. in view of European Patent Document #0,112,626 to Bashour for the same reasons set forth above for claim 46.

Art Unit: 2614

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
